In the industry of complex equipment design and manufacturing Callidus Group (2006) operates on the highest level. Based in Joure, The Netherlands, we focus on concept design, engineering and production of high standard, customized solutions for industrial and offshore applications. New solutions for existing problems. As a multidisciplinary engineering company we take care of the total process, from (early stage) consultancy and manufacturing to commissioning and maintenance. Innovative power, technical mastery and extremely well structured engineering and production make it easy to choose Callidus. The segments we service are mainly Oil & Gas, Offshore and Heavy Industry. Offshore and Heavy Industry.

Callidus Group systematically and continuously aims for top quality, security, sustainability, continuity and satisfied customers. Any possible negative impact on the environment resulting from our activities will be restricted to the barest minimum. We continually try to uphold the safety and wellbeing of our employees, visitors and clients in such a way that they will not be exposed to any unacceptable risks. This policy also extends to the prevention of injury and occupational diseases. In addition, Callidus Group focuses proactively on meeting the requirements of valid rules and regulations.

In order to realize this, Callidus Group has set up a management system that safeguards all the critical processes in the areas of Quality, Health, Safety and Environment (QHSE). The management system complies with the requirements of NEN-EN-ISO 9001:2008, OHSAS 18001:2007 and NEN-EN-ISO 14001:2004. This enables the system to be verified and confirmed by independent third parties.

The continuing improvements we realise are initiated through evaluations with clients, our proper internal consultative structure, regular internal audits, workplace inspections, toolbox talks and supplier evaluations. Our annual assessment of the management system, processing changes in rules, regulations and other requirements, serves as a source as well.

Once a year the executive board formulates the targets for improving the health, safety and environmental achievements as well as for increasing quality and customer satisfaction. The targets are drawn up, complied with and adjusted if necessary. The board, then, takes all possible measures to carry out the policy and to make sure that it is understood, supported and endorsed by all employees.

It's every Callidus Group employee's responsibility to honour all the agreements established in the management system. The Quality Assurance Officer is held responsible for the maintenance of the management system and the performance of the internal audits. The Quality Assurance Officer reports to the executive board.
